PROJECT REPORT

Assigned by : Yogendra Sir

Prepared by
Rohit & Ankuj

Assignment :

Research on an Open Source Software and Modify it.

Software Selected : KMSPico

What is KMSPico?

KMPico is a tool that is used to activate or get a license for the Microsoft Windows as well for the MS Office. It is developed by one of the most famous developers named Team Daz.

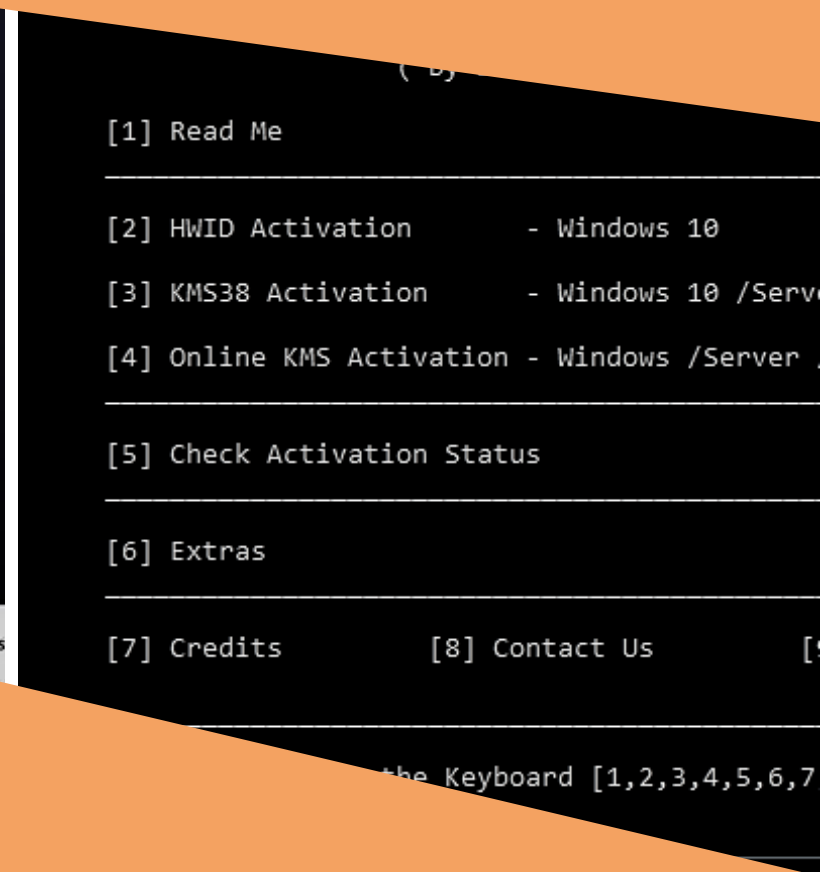

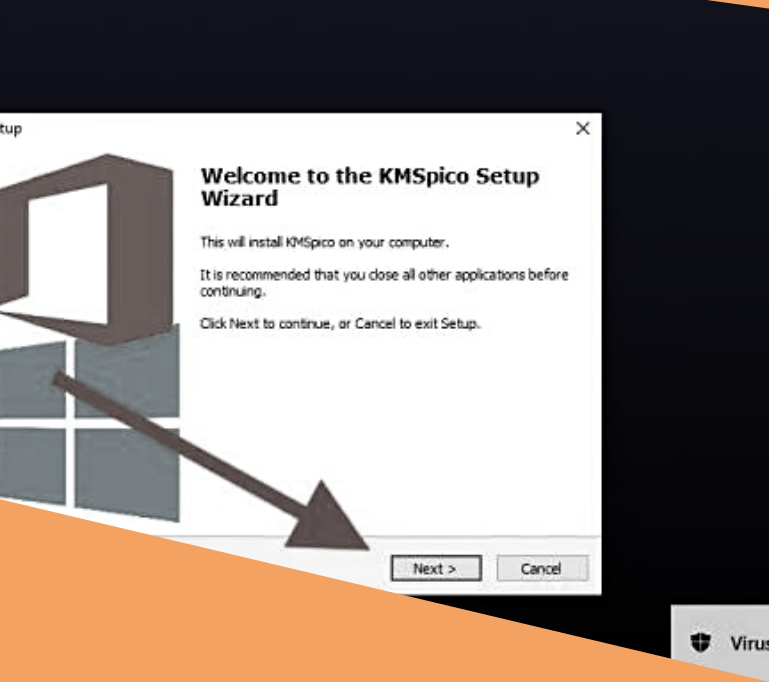

However, it is completely free to use there is no need to purchase it or spend money to download it. This basically works on the principle of Microsoft's own feature named as Key Management Server a.k.a KMS (KMSPico named derived from it).

The feature is used for the vast companies having a lot of machines at their place. In this way, it is hard to buy a Windows License for each machine and this is the reason why KMS introduced. Now a company has to just buy a KMS server for them and using it at a time they can get a license for all their machines.

However, this tool also works on it, and similarly, it creates a server on your machine and makes it look like a part of that server. There is one thing different is that this tool only keeps the product activated for 180 days. This is the reason why it keeps running in your machine and renews the license keys right after 180 days and makes it a permanent activation.

- KMSAuto Net
- Microsoft Toolkit
- Windows Loader
- Windows 10 Activator

Modified Software :

From This KMSPico we have removed various features and kept only the useful script that can activate Windows 10 and MS Office versions later than 2010.

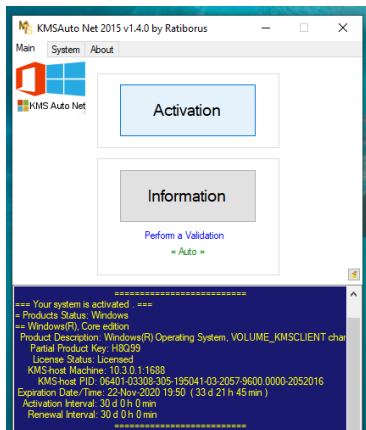

Name Given to Modified Software :

Microsoft Activator

KMSPico

Original Software can be downloaded from this link : [DOWNLOAD](#)

GUI of Original or Existing KMSPico :

Keypoints of Existing KMSPico :

Activates All verions Windows & MS Office.

Developed by Team DAZ.

Developed in JAVA, Visual Studio, Batch and C#.

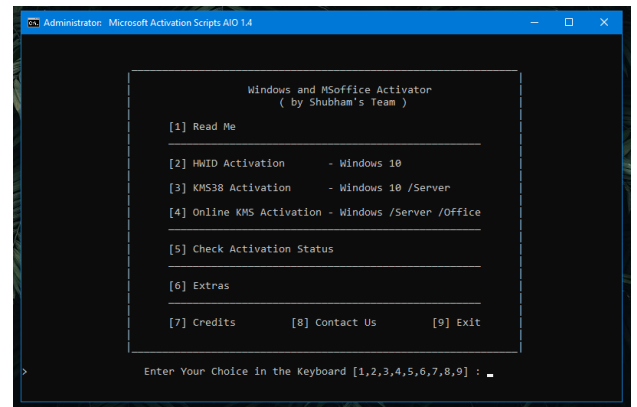

May contain hidden malicious tools or software.

It can not by-pass windows defender.

MicroSoft Activator

Modified Version can be downloaded from this link : [DOWNLOAD](#)

GUI of Modified KMSPico :

Keypoints of MicroSoft Activator :

Only Activates Windows 10 & New versions of MS Office.

Modified by Team Shubham.

Only contains the script that is essential which is written in batch programming.

Only contain the script written in batch

It can not by-pass windows defender.

Cons of KMSPico

Although KMSPico is a powerful software, but it is a freeware so there are :

60%

CHANCES OF
GETTING
MAWARE

25%

CHANCES OF
GETTING
ADWARE

10%

CHANCES OF
GETTING
SPYWARE

5%

IS THE
ACTUAL
SOFTWARE

Pros of Our Version :

In this modified version of KMSPico we have removed the EXTRAS (Malwares or Adwares or Viruses) from the code and maintained only the working Script with :

70%

IS THE ACTUAL
SOFTWARE

10%

IS THE GUI
SCRIPTS

20%
